

Subtraction Strategies

1. Subtracting by Place Value

2. Break Apart

$58 - 35 = 23$

$30 \quad 5$

$58 - 30 = 28$

$28 - 5 = 23$

A sequence of equations showing the 'break apart' strategy for 58 - 35. The number 35 is broken into 30 and 5. The problem is solved in two steps: 58 - 30 = 28, and then 28 - 5 = 23. A green bracket on the right groups the final result 23.
