

P.69 Q1

■ = +1
□ = -1

d) $(+4) - (+2) = 2$

Q2 a) $(-1) - (-4) = 3$

3c) $(-11) - (-4) = -7$

4.f) $(-5) - (+7) = -12$

4c) $(-9) - (+5) = -14$

7. $(+3) - (+1)$ et $(+1) - (+3)$

$(-3) - (-2)$ et $(-2) - (-3)$

Soustraire des nombres entiers à l'aide d'une droite numériques.

$$(+2) - (+9) = (+2) + (-9) = -7$$

$$(-2) - (+9) = (-2) + (-9) = -11$$

$$5 - 3 =$$

Que faut-il ajouter a 3 pour obtenir 5?

Il faut ajouter 2 a 3 pour obtenir 5.

Donc $5 - 3 = 2$

$$(+5) - (-3) =$$

Que faut-il ajouter a -3 pour obtenir +5?

$$(+5) - (-3) = +8$$
